Edelbrock® Intake Manifold & Installation Kits for Ford, Chevy, & Pontiac

Olive Branch, MS — Edelbrock announces the launch of three new all-in-one intake manifold upgrade kits, engineered to simplify installation while delivering proven performance gains. Each kit combines Edelbrock's legendary intake manifold technology with the essential installation components—gaskets, intake bolts, silicone, and carburetor studs—eliminating the guesswork while saving time and money.

For Small-Block Ford enthusiasts, the **RPM Air-Gap Manifold Installation Kit for Small-Block Ford (#7521-KIT)** delivers the benefits of the race-bred RPM Air-Gap design, which separates the runners from the hot engine oil to provide a cooler, denser intake charge.

For Big-Block Chevrolet Oval Port applications, the **RPM Air-Gap Manifold Installation Kit (#7561-KIT)** brings the same high-performance Air-Gap technology to Chevy builders, combining proven horsepower with the convenience of a complete, ready-to-install package.

For Pontiac owners, the **Performer RPM Manifold & Installation Kit for Pontiac (#7156-KIT)** offers a performance-driven alternative. This kit includes Edelbrock's Performer RPM intake manifold, delivering excellent street and strip performance while maintaining the same convenient all-in-one installation.

All three kits feature Edelbrock's unmatched attention to quality and engineering, while addressing the needs of different platforms with engine-specific manifolds. By packaging the intake manifold with the most commonly required installation components, Edelbrock ensures enthusiasts can upgrade with confidence and save money, regardless of engine type.

With these new kits, Edelbrock continues its mission of making performance upgrades more accessible for enthusiasts across the Ford, Chevrolet, and Pontiac communities.
